

HandsMen Threads: Elevating the Art of Sophistication in Men's Fashion

Project Overview:

What we are building

HandsMen Threads is a fashion-industry organization that wants to use Salesforce to improve its data management, customer relationship management, order processing, inventory management, and business automation.

The Salesforce solution will provide a centralized data model for storing business information and will introduce automated processes to reduce manual work and improve data accuracy.

Why we are building it

The organization needs:

- A structured way to store business data
- Accurate and consistent data
- Better customer communication
- A loyalty program based on purchasing behavior
- Automatic inventory notifications
- Automated processing of bulk orders
- Improved operational efficiency

Creating Developer Account:

A Salesforce Developer Account was created to develop and test the HandsMen Threads application. The Developer Edition provides a Salesforce environment where custom objects, fields, relationships, automation, Apex code, and Lightning components can be configured and tested.

Creating a developer org in salesforce.

Go to <https://developer.salesforce.com/signup>

On the sign up form, enter the following details and hit the sign up button.

Build for the Agentic Enterprise. Sign up for your Developer Edition.

The entire Salesforce platform - exposed as APIs, MCP tools, and CLI commands. Build apps, ship agents, and let coding agents do the heavy lifting with Salesforce Headless 360.

- ✓ Build AI agents with Agentforce, grounded in your data with Data 360
- ✓ Connect Claude Code, Cursor, or Codex to your org with hosted MCP
- ✓ Build in the browser with the Agentforce Vibes IDE - no setup required
- ✓ Drag-and-drop when you want it, Apex when you need it
- ✓ 60+ MCP tools and 30+ coding skills, ready out of the box

Sign up for your Developer Edition

A free Salesforce Platform environment with Agentforce and Data 360

Phase-1: Functional Requirements And Analysis:

This is very important because these requirements will guide everything we build.

Requirement 1 — Data Model

The system must maintain business data in a structured Salesforce data model.

Purpose:

To ensure customer, product, order and inventory information can be stored and related appropriately.

Salesforceconcept:

Custom Objects + Fields + Relationships.

Requirement 2 — Data Integrity

The system must maintain data integrity directly from the Salesforce UI.

Purpose:

Users should not be able to enter invalid or inconsistent information.

Salesforce concepts:

- Validation Rules
- Required fields
- Appropriate field data types
- Picklists
- Possibly Flow-based validation where necessary

Requirement 3 — Automated Order Confirmation

After an order is confirmed, the customer should automatically receive an email notification.

Businessbenefit:

The customer immediately knows that their order has been confirmed.

Salesforce concept:

Record-Triggered Flow → Email Alert

We'll probably implement this using a Record-Triggered Flow, depending on the detailed SkillWallet instructions.

Requirement 4 — Dynamic Loyalty Program

Customer loyalty status should change according to their purchase history.

Businessbenefit:

Customers can receive personalized rewards and the company can encourage repeat purchases.

Salesforce concepts likely involved:

- Customer/Account data
- Order information
- Apex/Flow
- Possibly scheduled/asynchronous processing depending on the exact requirement

Requirement 5 — Proactive Stock Alerts

When inventory falls below 5 units, the warehouse team must automatically receive an email notification.

Condition:

Stock < 5 → Notify Warehouse Team

Businessbenefit:

The warehouse team can replenish inventory before the product becomes unavailable.

Salesforce concepts:

- Inventory object
- Record-Triggered Flow
- Email Alert

Requirement 6 — Scheduled Bulk Order Updates

Every day at **midnight**, the system must process bulk orders.

The process should:

- Update financial records
- Adjust inventory
- Maintain accurate stock levels

Businessbenefit:

The organization doesn't need employees to manually process these operations every day.

Salesforce concepts:

- Apex
- Asynchronous Apex
- Scheduled Apex
- Batch Apex

This requirement is likely to be one of the more technically important parts of the project.

Phase-2 : Back-End:**Custom Object Configuration:****What was done**

The required custom Salesforce objects were configured for the HandsMen Threads application.

Why it was done

Custom objects provide a structured way to store business-specific information that is not available in standard Salesforce objects.

How it was done

The following custom objects were configured:

- HandsMen Customer
- HandsMen Order
- HandsMen Product
- Inventory
- Marketing Campaign

2.1 HandsMen Customer Configuration:

To Navigate to Setup page:

- 1) Click on gear icon → click setup.
- 2) To create an object:
- 3) From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.
- 4) Enter the label name → HandsMen Customer
- 5) Plural label name → HandsMen Customer
- 6) Enter Record Name Label and Format
- 7) Record Name → HandsMen Customer Name
- 8) Data Type → Text
- 9) Click on Allow reports

The screenshot shows the Salesforce Setup interface for configuring a custom object. The breadcrumb trail is **Setup > OBJECT MANAGER**. The page title is **HandsMen Customer**. On the left, a sidebar lists various configuration options: Details, Fields & Relationships, Page Layouts, Lightning Record Pages, Buttons, Links, and Actions, Compact Layouts, Field Sets, Object Limits, Record Types, Related Lookup Filters, Search Layouts, List View Button Layout, Restriction Rules, Scoping Rules, and Object Access. The main content area is titled **Custom Object Definition Edit** and includes a **Save** button, a **Save & New** button, and a **Cancel** button. Below this is the **Custom Object Information** section, which contains the following fields and values:

- Label:** HandsMen Customer (Example: Account)
- Plural Label:** HandsMen Customers (Example: Accounts)
- Starts with vowel sound:** ☐
- Object Name:** HandsMen_Customer (Example: Account)
- Description:** (Empty text box)
- Context Sensitive Help Setting:** ☒ Open the standard Salesforce.com Help & Training window (Example: Account)
- Content Name:** --None--

Below the **Custom Object Information** section is the **Enter Record Name Label and Format** section. It contains the following text: "The Record Name appears in page layouts, key lists, related lists, lookups, and search results. For example, the Record Name for Account is 'Account Name' and for Case it is 'Case Number'. Note that the Record Name field is always called 'Name' when referenced via the API." Below this text are the **Record Name** and **Example** fields, both containing the value **HandsMen_Customer Name**.

10) Allow search → Save.

The screenshot shows the 'HandsMen Customer' object configuration page in Salesforce Setup. The left sidebar lists various configuration options: Details, Fields & Relationships, Page Layouts, Lightning Record Pages, Buttons, Links, and Actions, Compact Layouts, Field Sets, Object Limits, Record Types, Related Lookup Filters, Search Layouts, List View Button Layout, Restriction Rules, Scoping Rules, and Object Access. The main content area is titled 'Enter Record Name Label and Format'. It includes a text input for 'Record Name' with the value 'HandsMen Customer Name' and an example 'Account Name'. Below this is a 'Data Type' dropdown set to 'Text' with a warning: 'Warning: If you plan to insert a high volume of records in this object, via the API for example, use the Text data type.' The 'Optional Features' section has checkboxes for 'Allow Reports' (checked), 'Allow Activities' (checked), 'Track Field History' (unchecked), 'Allow in Chatter Groups' (unchecked), and 'Enable Licensing' (unchecked). The 'Object Classification' section has a note about Enterprise vs. Light Application objects and checkboxes for 'Allow Sharing' (checked), 'Allow Bulk API Access' (checked), and 'Allow Streaming API Access' (checked). The 'Deployment Status' section has radio buttons for 'In Development' (unchecked) and 'Deployed' (checked). The 'Search Status' section has a note about searchability and a checkbox for 'Allow Search' (checked).

2.2 HandsMen Order Configuration:

- 1) To create an object:
- 2) From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.
- 3) Enter the label name → HandsMen Order
- 4) Plural label name → HandsMen Orders
- 5) Enter Record Name Label and Format
- 6) Record Name → HandsMen OrderNumber
- 7) Data Type → Auto Number
- 8) Display Format → O-{0000}
- 9) Starting Number → 001

The screenshot shows the 'New Custom Object' page in Salesforce Setup. The top navigation bar includes 'Setup', 'Home', and 'Object Manager'. The main heading is 'New Custom Object' with a 'Help for this Page' link. A yellow banner message states: 'Permissions for this object are disabled for all profiles by default. You can enable object permissions in permission sets or by editing custom profiles. Tell me more! Don't show this message again.' Below this is the 'Custom Object Definition Edit' section with 'Save', 'Save & New', and 'Cancel' buttons. The 'Custom Object Information' section includes a note about singular and plural labels. It has input fields for 'Label' (HandsMen Order, Example: Account), 'Plural Label' (HandsMen Orders, Example: Accounts), and 'Object Name' (HandsMen_Order, Example: Account). There is a checkbox for 'Starts with vowel sound' (unchecked) and a text area for 'Description'. At the bottom, there are radio buttons for 'Context-Sensitive Help Setting' (Open the standard Salesforce.com Help & Training window, selected) and 'Open a window using a Visualforce page' (unchecked), and a dropdown for 'Content Name' (None).

10) Click on Allow reports

11) Allow search → Save

Enter Record Name Label and Format

The Record Name appears in page layouts, key lists, related lists, lookups, and search results. For example, the Record Name for Account is "Account Name" and for Case it is "Case Number". Note that the Record Name field is always called "Name" when referenced via the API.

Record Name: **Example: Account Name**

Data Type: **Warning:** If you plan to insert a high volume of records in this object, via the API for example, use the Text data type.

Display Format: **Example: A-{0000}** [What Is This?](#)

Fields and Relationships:-

HandsMen Customer – Creating Fields:

There are totally 8 fields we need to create:

1. Email
2. FirstName
3. LastName
4. Full Name
5. Loyalty Points
6. Loyalty Status
7. Phone
8. Total Purchases

1)Email:

Salesforce → Setup → Object Manager → HandsMen Customer → Fields & Relationships

New → Email → Next

- Field Label → Email
- Click Next

- Click Next
- Click Save

Email created.

2)FirstName:

Fields & Relationships → New → Text → Next

- Field Label → FirstName
- Length → 20
- Click Next
- Click Next
- Click Save

FirstName created.

3)LastName:

Fields & Relationships → New → Text → Next

- Field Label → FirstName
- Length → 20
- Click Next
- Click Next
- Click Save

FirstName created.

4)FullName:

Fields & Relationships → New → Formula → Next

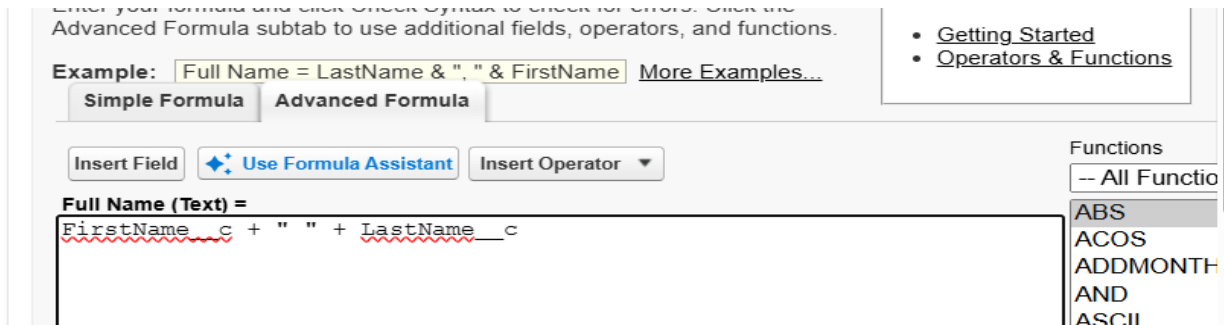

- Field Label → Full Name
- Formula Return Type → Text
- Click Next

Enter:

FirstName__c & " " & LastName__c

Check Syntax → Next → Next → Save

Full Name created.

5) Loyalty Points:

Fields & Relationships → New → Number → Next

- Field Label → Loyalty Points
- Length → 18
- Decimal Places → 0
- Click Next
- Click Next
- Click Save

Loyalty Points created.

6) Loyalty Status:

Fields & Relationships → New → Picklist → Next

- Field Label → Loyalty Status
- Select Enter values, with each value separated by a new line

Enter:

Bronze

Silver

Gold

Next → Next → Save

Loyalty Status created.

The screenshot shows the Salesforce Setup interface for a user named 'HandsMen Customer'. The navigation bar at the top includes 'Setup', 'Home', and 'Object Manager'. The left sidebar lists various setup options, with 'Fields & Relationships' currently selected. The main content area displays the configuration for a new field named 'Loyalty Status'. The 'Field Label' is 'Loyalty Status'. Under the 'Values' section, the option 'Enter values, with each value separated by a new line' is selected. A text box below contains the values 'Gold', 'Silver', and 'Bronze'. There are three checkboxes: 'Display values alphabetically, not in the order entered' (unchecked), 'Use first value as default value' (unchecked), and 'Restrict picklist to the values defined in the value set' (checked). The 'Field Name' is 'Loyalty_Status'. There are empty fields for 'Description' and 'Help Text'. Navigation buttons 'Previous', 'Next', and 'Cancel' are at the top right of the configuration area.

7) Phone:

Fields & Relationships → New → Phone → Next

- Field Label → Phone
- Click Next
- Click Next
- Click Save

Phone created.

8) Total Purchases:

Fields & Relationships → New → Number → Next

- Field Label → Total Purchases
- Length → 18
- Decimal Places → 0
- Click Next
- Click Next
- Click Save

Total Purchases created.

Field Label ⓘ

Please enter the length of the number and the number of decimal places. For example, a number with a length of 8 and 2 decimal places can accept values up to "12345678.90".

Record Types

Specify the type of information that the custom field will contain.

Data Type

☐ None Selected Select one of the data types below.

☐ Auto Number A system-generated sequence number that uses a display format you define. The number is automatically incremented for each new record.

☐ Formula A read-only field that derives its value from a formula expression you define. The formula field is updated when any of the source fields change.

☐ Roll-Up Summary ⓘ A read-only field that displays the sum, minimum, or maximum value of a field in a related list or the record count of all records listed in a related list.

☒ Lookup Relationship Creates a relationship that links this object to another object. The relationship field allows users to click on a lookup icon to select a value from a popup list. The other object is the source of the values in the list.

☐ Master-Detail Relationship Creates a special type of parent-child relationship between this object (the child, or "detail") and another object (the parent, or "master") where:

- The relationship field is required on all detail records

The screenshot shows the Salesforce Setup interface. At the top, there are tabs for Setup, Home, and Object Manager. The Object Manager tab is selected, and the breadcrumb trail shows 'SETUP > OBJECT MANAGER'. The main heading is 'HandsMen Product'. On the left sidebar, under 'Details', the 'Fields & Relationships' section is highlighted. The main content area shows three options for the field type: 'External Lookup Relationship', 'Checkbox', and 'Currency'. The 'Currency' option is selected with a blue radio button. To the right of the 'Currency' option, there is a description: 'Allows users to enter a dollar or other currency amount and automatically formats the field as a currency amount. This can be useful if you export data to Excel or another spreadsheet.'

The screenshot shows the 'Step 2. Enter the details' screen for creating a new field. The title bar at the top says 'Step 2. Enter the details' and 'Step 2 of 4'. There are three buttons at the top right: 'Previous', 'Next', and 'Cancel'. The main form has three sections: 'Field Label', 'Length', and 'Field Name'. The 'Field Label' section has a text input field with 'Price' entered and an information icon. Below it, a note says: 'Please enter the length of the number and the number of decimal places. For example, a number with a length of 8 and 2 decimal places can accept values up to "12345678.90".' The 'Length' section has a text input field with '18' entered and a label 'Number of digits to the left of the decimal point'. The 'Decimal Places' section has a text input field with '0' entered and a label 'Number of digits to the right of the decimal point'. The 'Field Name' section has a text input field with 'Price' entered and an information icon.

3)SKU:

Fields & Relationships → New → Text → Next

Enter:

- Field Label: SKU
- Length: 18

Then:

Next → Next → Save

SKU created.

The screenshot shows a web interface for creating a new custom field. The title is 'HandsMen Product New Custom Field'. Below the title is a blue bar with the text 'Step 2. Enter the details'. The form has three input fields: 'Field Label' with the value 'SKU', 'Length' with the value '18', and 'Field Name' with the value 'SKU'. There are information icons (i) next to each field. A note above the 'Length' field says 'Please enter the maximum length for a text field below.'

4) Stock Quantity:

Fields & Relationships → New → Number → Next

Enter:

- Field Label: Stock Quantity
- Length: 18
- Decimal Places: 0

Then:

Next → Next → Save

Stock Quantity created.

The screenshot shows a web interface for creating a new custom field. The title is 'Stock Quantity'. Below the title is a blue bar with the text 'Step 2. Enter the details'. The form has three input fields: 'Field Label' with the value 'Stock Quantity', 'Length' with the value '18', and 'Decimal Places' with the value '0'. There are information icons (i) next to each field. A note above the 'Length' and 'Decimal Places' fields says 'Please enter the length of the number and the number of decimal places. For example, a number with a length of 18 and 2 decimal places can accept values up to "12345678.90"'. Below the 'Length' field is a note 'Number of digits to the left of the decimal point'. Below the 'Decimal Places' field is a note 'Number of digits to the right of the decimal point'. The 'Field Name' is 'Stock_Quantity'.

Inventory – Creating Fields & Relationship:

Inventory has 4 custom fields:

1. Product → Master-Detail(HandsMen Product)
2. Stock Quantity → Number(18,0)

3. Stock Status → Formula (Text)
4. Warehouse → Text(20)

1) Product:

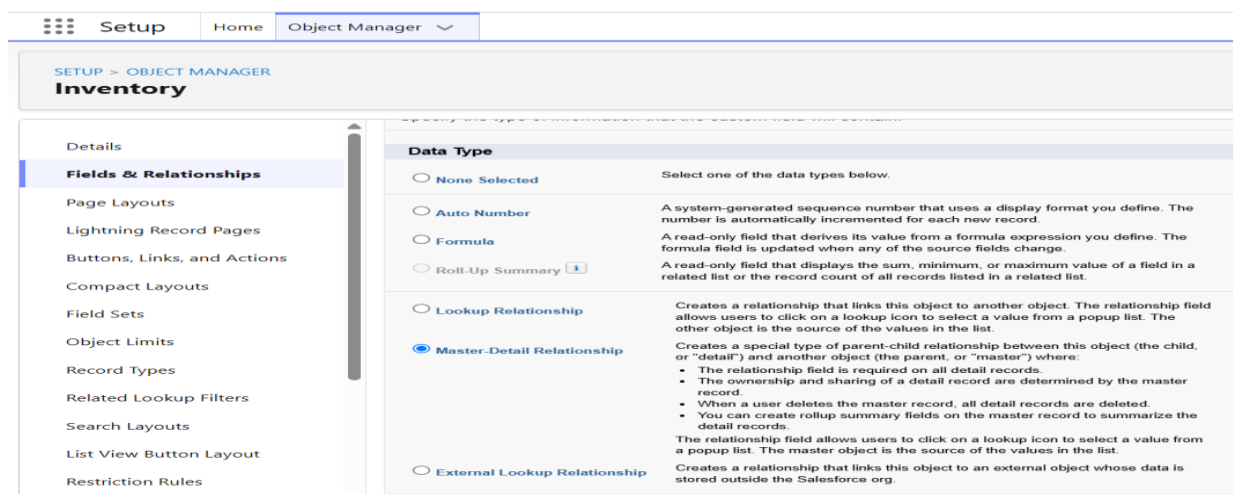

Salesforce →  Setup → Object Manager → Inventory → Fields & Relationships → New

This is a Master-Detail Relationship.

Fields & Relationships → New → Master-Detail Relationship → Next

Now:

- Related To: HandsMen Product
- Click Next
- Field Label: Product
- Click Next
- Click Next
- Click Next
- Click Save

Data Type	
☐ None Selected	Select one of the data types below.
☐ Auto Number	A system-generated sequence number that uses a display format you define. The number is automatically incremented for each new record.
☐ Formula	A read-only field that derives its value from a formula expression you define. The formula field is updated when any of the source fields change.
☐ Roll-Up Summary 	A read-only field that displays the sum, minimum, or maximum value of a field in a related list or the record count of all records listed in a related list.
☐ Lookup Relationship	Creates a relationship that links this object to another object. The relationship field allows users to click on a lookup icon to select a value from a popup list. The other object is the source of the values in the list.
☒ Master-Detail Relationship	Creates a special type of parent-child relationship between this object (the child, or "detail") and another object (the parent, or "master") where: • The relationship field is required on all detail records. • The ownership and sharing of a detail record are determined by the master record. • When a user deletes the master record, all detail records are deleted. • You can create rollup summary fields on the master record to summarize the detail records. The relationship field allows users to click on a lookup icon to select a value from a popup list. The master object is the source of the values in the list.
☐ External Lookup Relationship	Creates a relationship that links this object to an external object whose data is stored outside the Salesforce org.

Warehouse created.

The screenshot shows the Salesforce Object Manager interface for the 'Inventory' object. The left sidebar contains a menu with options: Details, Fields & Relationships (selected), Page Layouts, Lightning Record Pages, Buttons, Links, and Actions, Compact Layouts, Field Sets, Object Limits, Record Types, Related Lookup Filters, and Search Layouts. The main content area is titled 'SETUP > OBJECT MANAGER Inventory' and has navigation buttons 'Previous', 'Next', and 'Cancel'. The 'Fields & Relationships' section is active, showing a form to create a new field. The form fields are: Field Label (Warehouse), Length (20), Field Name (Warehouse), Description (empty), and Help Text (empty). Below these fields are checkboxes for 'Required' (Always require a value in this field in order to save a record), 'Unique' (Do not allow duplicate values), and 'External ID' (Set this field as the unique record identifier from an external system). There are also radio buttons for 'Treat "ABC" and "abc" as duplicate values (case insensitive)' and 'Treat "ABC" and "abc" as different values (case sensitive)'. At the bottom, there is a checkbox for 'Auto add to custom report' and a checkbox for 'Add this field to existing custom report types that contain this entity' (checked).

Marketing Campaign – Creating Fields & Relationship:

Marketing Campaign has 3 custom fields:

1. End Date → End_Date__c → Date
2. HandsMen Customer → HandsMen_Customer__c → Lookup (HandsMen Customer)
3. Start Date → Start_Date__c → Date

1) End Date:

Salesforce →  Setup → Object Manager → Marketing Campaign → Fields & Relationships

New → Date → Next

- Field Label: End Date

- Next → Next → Save

The screenshot shows the Salesforce Setup interface for the 'Marketing Campaign' object. The top navigation bar includes 'Setup', 'Home', and 'Object Manager'. The breadcrumb trail is 'SETUP > OBJECT MANAGER'. The left sidebar contains a menu with 'Details', 'Fields & Relationships' (highlighted), 'Page Layouts', 'Lightning Record Pages', 'Buttons, Links, and Actions', and 'Compact Layouts'. The main content area displays the 'Fields & Relationships' section for 'Marketing Campaign'. It lists several field types: 'External Lookup Relationship', 'Checkbox', 'Currency', 'Date' (selected), 'Date/Time', and 'Email'. Each type has a brief description of its functionality.

The screenshot shows the 'New Custom Field' configuration page for the 'Marketing Campaign' object. The top navigation bar and breadcrumb trail are the same as the previous screenshot. The left sidebar is also the same. The main content area is titled 'Marketing Campaign New Custom Field' and shows 'Step 2 of 4: Enter the details'. It includes a progress bar and navigation buttons: 'Previous', 'Next', and 'Cancel'. The 'Field Label' is 'End Date' and the 'Field Name' is 'End_Date'. Both fields have an information icon (i) to the right.

2) HandsMen Customer:

3) Start Date:

New → Date → Next

- Field Label: Start Date

- Next → Next → **Save**

The screenshot shows the Salesforce Setup interface. The top navigation bar includes 'Setup', 'Home', and 'Object Manager'. The left sidebar shows a list of setup options: Details, Fields & Relationships (selected), Page Layouts, Lightning Record Pages, Buttons, Links, and Actions, and Compact Layouts. The main content area is titled 'Marketing Campaign' and 'New Custom Field'. It shows 'Step 2 of 4: Enter the details'. The form has two fields: 'Field Label' with the value 'Start Date' and 'Field Name' with the value 'Start_Date'. Navigation buttons 'Previous', 'Next', and 'Cancel' are visible.

Creating a Tab for an Object:

- 1) Go to Setup.
- 2) In the Quick Find box, search Tabs.
- 3) Click Tabs.
- 4) Under Custom Object Tabs, click New Custom Object Tab.
- 5) Select the Object for which you want to create the tab.
- 6) Select a Tab Style.
- 7) Click Next.
- 8) Click Next again.
- 9) Click Save.

The screenshot shows the Salesforce Setup interface for creating a new custom object tab. The top navigation bar includes 'Setup', 'Home', and 'Object Manager'. The left sidebar shows a search for 'tabs' and a list of setup options: User Interface, Rename Tabs and Labels, and Tabs (selected). The main content area is titled 'New Custom Object Tab'. It shows 'Step 1 of 3: Enter the Details'. The form has several fields: 'Object' (HandsMen Customer), 'Tab Style' (Classic), 'Splash Page Custom Link' (None), and 'Description'. Navigation buttons 'Next' and 'Cancel' are visible.

Like wise we need to create a tab for every object we created.

To create a lightning app page:

Error Message

Example:
 This message will appear when Error Condition formula is **true**

Error Message

This error message can either appear at the top of the page or below a specific field on the page

Error Location ☐ Top of Page ☒ Field

Validation Rule 2:

- 1) Create One more Validation rule for Inventory object.
- 2) Enter Rule name as "Stock Quantity".
- 3) Insert the Error Condition Formula as : -
 Stock_Quantity__c <= 0
- 4) Enter the Error Message as " the inventory count is never less than zero.", select the Error location as Top of Page and click Save.

Example: [More Examples...](#)
 Display an error if Discount is more than 30%
 If this formula expression is **true**, display the text defined in the Error Message area

No errors found

Functions
 -- All Function Categories --
 ABS
 ACOS
 ADDMONTHS
 AND
 ASCII
 ASIN

 ABS(number)
 Returns the absolute value of a number, a number without its sign
[Help on this function](#)

Error Message

Example:
 This message will appear when Error Condition formula is **true**

Error Message

This error message can either appear at the top of the page or below a specific field on the page

Error Location ☒ Top of Page ☐ Field

Validation Rule 3:

- 1) Create Validation rule for HandsMen Customer object.
- 2) Enter Rule name as "Email".
- 3) Insert the Error Condition Formula as : -
NOT CONTAINS(Email, "@gmail.com")
- 4) Enter the Error Message as "Please fill Correct Gmail", select the Error location as Top of Page and click Save.

The screenshot shows the Salesforce Validation Rule configuration page. At the top, there's an example: **Example:** `Discount_Percent_c > 0.30` with a link [More Examples...](#). Below this, it says "Display an error if Discount is more than 30%". A note states: "If this formula expression is **true**, display the text defined in the Error Message area".

There are three buttons: **Insert Field**, **Use Formula Assistant** (with a blue star icon), and **Insert Operator** (with a dropdown arrow). The formula text area contains: `NOT CONTAINS(Email__c , "@gmail.com")`. Below the formula area is a **Check Syntax** button and the text "No errors found".

On the right, there's a **Functions** section with a dropdown menu set to **-- All Function Categories --**. A list of functions is shown: **ABS**, **ACOS**, **ADDMONTHS**, **AND**, **ASCII**, and **ASIN**. Below the list is an **Insert Selected Function** button. A description for **ABS(number)** is provided: "Returns the absolute value of a number, a number without its sign". A link [Help on this function](#) is also present.

The **Error Message** section is highlighted with a blue header. It shows an example: **Example:** `Discount percent cannot exceed 30%`. Below this, it says "This message will appear when Error Condition formula is **true**". The **Error Message** text area contains: `"Please fill Correct Gmail"`. Below the text area, it says "This error message can either appear at the top of the page or below a specific field on the page". The **Error Location** section has two radio buttons: **Top of Page** (selected) and **Field** (with an information icon).

Data Security - Profiles:

- 1) Go to setup → type profiles in quick find box → click on profiles → clone the desired profile (Standard user) → enter profile name (Platform 1) → Save.
- 2) While still on the profile page, then click Edit.
- 3) Scroll down to Custom Object Permissions and Give access permissions for HandsMen products and Inventory objects.
- 4) Scroll down and Click on Save.

Steps to Create a Classic Email Template:

- Go to Salesforce Setup
- Click on the Gear Icon (⚙) in the top-right corner and select Setup.
- Navigate to Classic Email Templates
- In Quick Find, search for Classic Email Templates and click on it.
- Click "New Template"
- Choose Text, HTML (with Classic Letterhead), Custom (without Classic Letterhead), or Visualforce.
- Select HTML (with Classic Letterhead) for a formatted email.

SETUP
Classic Email Templates

Email Template
New Template

Step 1. Email Template: New Template

Choose the type of email template you would like to create.

☐ Text
 ☒ HTML (using Classic Letterhead)
 ☐ Custom (without using Classic Letterhead)
 ☐ Visualforce

1. Create Order Confirmation Email Template

1. Navigate to **Setup** → **Email Templates** in Salesforce.
2. Click **New Email Template**.
3. Select **HTML** as the template type and create letterhead.
4. Enter the template name as **Order Confirmation**.
5. Add the subject and email body containing the order confirmation details.
6. Save the template.
7. Configure the automation to send the email when an **Order is placed**.

2. Create Low Stock Alert Email Template

1. Navigate to **Setup → Email Templates**.
2. Click **New Email Template**.
3. Select **Text** as the template type.
4. Enter the template name as **Low Stock Alert**.
5. Add a message notifying the inventory team about low stock.
6. Save the template.
7. Configure the automation to trigger when:
`Inventory__c.Stock_Quantity__c < 5`

Steps to Create Email Alerts

1. Navigate to **Setup** → **Email Alerts**.
2. Click **New Email Alert**.
3. Enter the **Description** for the alert.
4. Select the appropriate **Email Template**.
5. Select the object on which the alert will operate.
6. Specify the **recipient(s)** who should receive the email.
7. Save the Email Alert.
8. Repeat the process for each required notification.

Low Stock Email Alert

1. Go to **Setup** in Salesforce.
2. Search for **Email Alerts** in the Quick Find box.
3. Click **Email Alerts**.
4. Click **New Email Alert**.
5. Enter the description as **low stock email alert**
6. Select **Inventory** as the **Object**.
7. Select the **Low Stock Alert** email template.

8. Select the required recipients, such as the **Inventory Manager** or inventory team.
9. Click **Save**.
10. Use this Email Alert in the **Low Stock Alert Flow**.
11. Configure the Flow condition as:
 $\text{Stock_Quantity_c} < 5$
12. When the condition is satisfied, the Flow invokes the **Low Stock Email Alert**.

Steps to Configure Salesforce Flows

1. Order Confirmation Flow

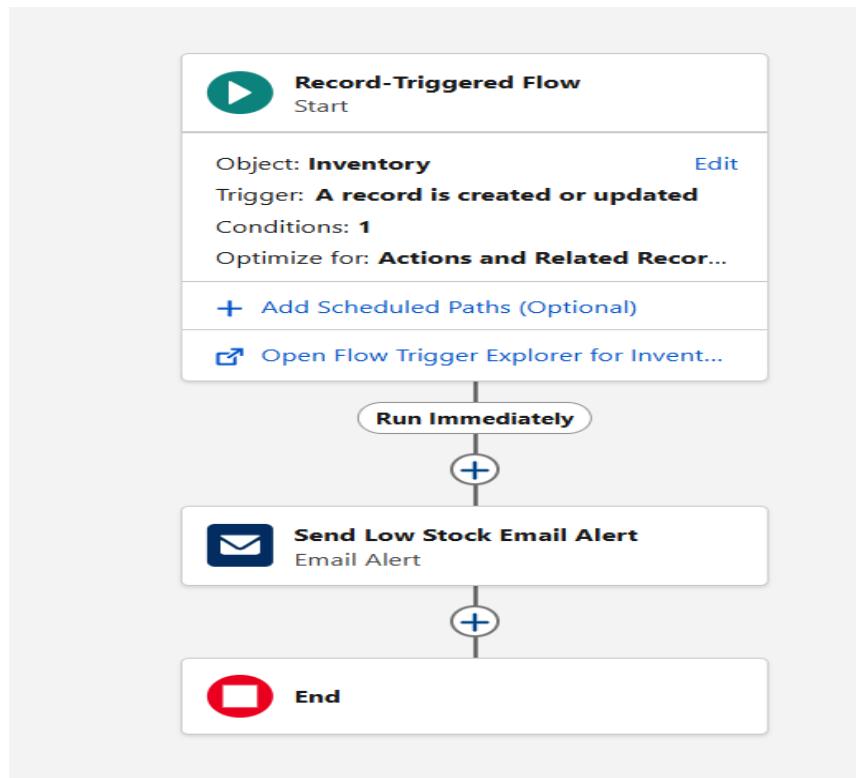

1. Go to **Setup** → **Flows**.
2. Click **New Flow**.
3. Select **Record-Triggered Flow**.
4. Select the **HandsMen Order** object.
5. Configure the trigger to run when a record is **created or updated**.
6. Set the entry condition:
Order__c.Status__c = Confirmed
7. Add an **Email Alert** action.
8. Select **Order Confirmation Email Alert**.
9. Configure the required recipient details.
10. Save the Flow as **Order Confirmation Flow**.

11. Click **Activate**.
12. When an order reaches **Confirmed** status, the Flow sends the order confirmation email.

Stock Alert Flow

1. Go to **Setup → Flows**.
2. Click **New Flow**.
3. Select **Record-Triggered Flow**.
4. Select the **Inventory** object.
5. Configure the Flow to run when an Inventory record is **created or updated**.
6. Set the entry condition:
`Inventory__c.Stock_Quantity__c < 5`
7. Add an **Email Alert** action.
8. Select the **Low Stock Alert** email alert.
9. Save the Flow as **Stock Alert Flow**.
10. Click **Activate**.
11. When the stock quantity falls below **5**, the Flow sends the low-stock notification

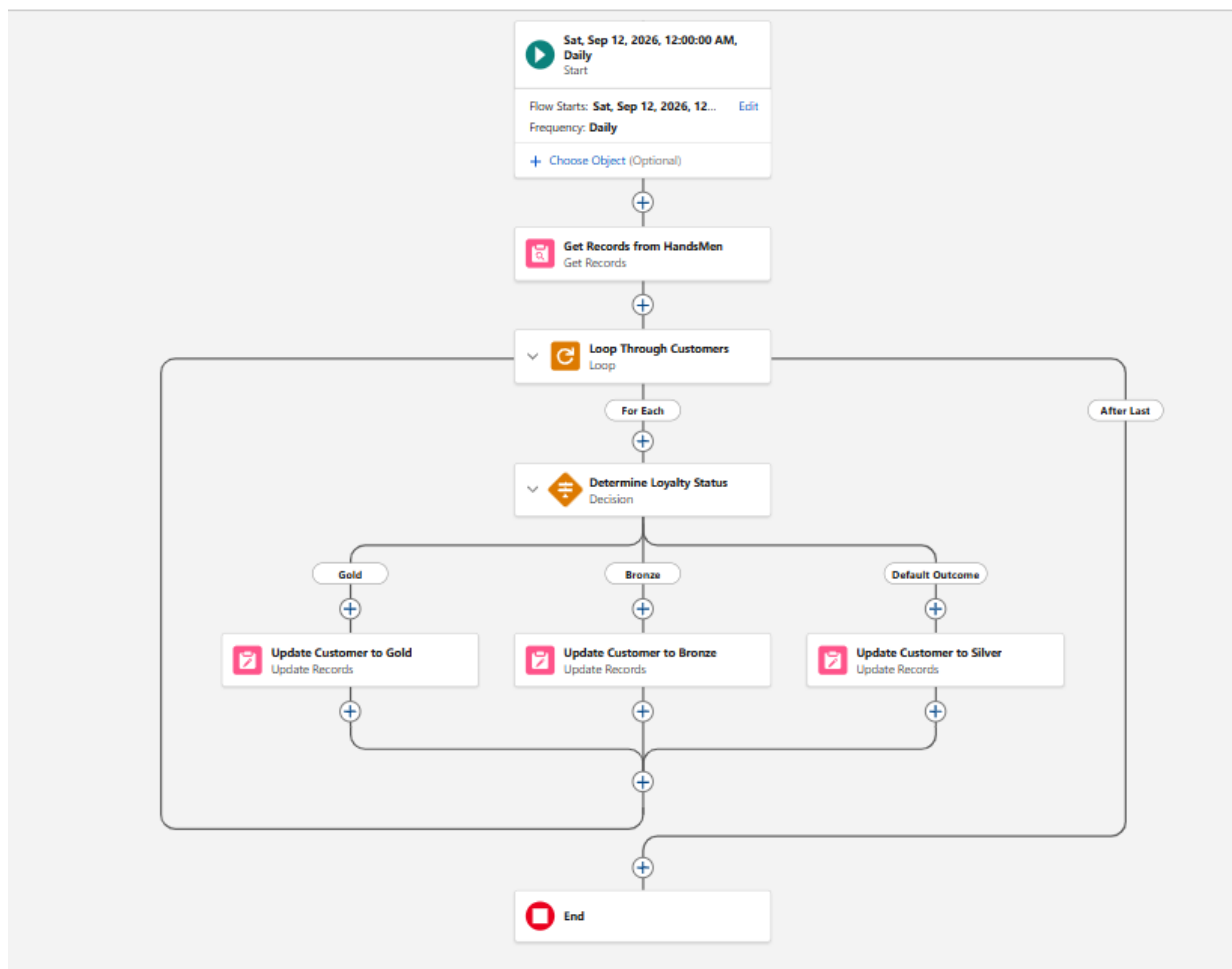

Loyalty Status Flow

1. Go to **Setup** → **Flows**.
2. Click **New Flow**.
3. Select **Scheduled-Triggered Flow**.
4. Select the **HandsMen Customer** object.
5. Configure the Flow to run **daily**.
6. Retrieve the customer records that need to be evaluated.
7. Add a **Decision** element to check the customer's purchase amount.
8. Set the loyalty conditions:
 - $\text{Total_Purchases_c} > 1000 \rightarrow \text{Gold}$
 - $\text{Total_Purchases_c} < 500 \rightarrow \text{Bronze}$
 - Otherwise → **Silver**
9. Add an **Update Records** element.
10. Update the customer's `Loyalty_Status__c` field based on the decision.
11. Save the Flow as **Loyalty Status Flow**.

12. Click **Activate**.

13. The Flow runs daily and automatically updates the customer's loyalty status.

Steps to Create Apex Triggers

In **Developer Console**:

1. Open **Developer Console**.
2. Click **File → New → Apex Class**.
3. Enter: **UpdateOrderTotalHandler**
4. Click **OK**.
5. The class opens in a separate tab.
6. Write/paste your **handler class code**.
7. Click **File → Save**.

```
Code Coverage: None API Version: 67
1 public class UpdateOrderTotalHandler {
2
3     public static void calculateTotal(List<HandsMen_Order__c> orders) {
4
5         Set<Id> productIds = new Set<Id>();
6
7
8         for (HandsMen_Order__c ord : orders) {
9             if (ord.Product1__c != null) {
10                 productIds.add(ord.Product1__c);
11             }
12         }
13
14
15         Map<Id, Decimal> priceMap = new Map<Id, Decimal>();
16
17         for (HandsMen_Product__c product : [
18             SELECT Id, Price__c
19             FROM HandsMen_Product__c
20             WHERE Id IN :productIds
21         ]) {
22             priceMap.put(product.Id, product.Price__c);
23         }
```

Create the Apex Trigger separately

1. In Developer Console, click **File → New → Apex Trigger**.
2. Enter the trigger name: **UpdateOrderTotalTrigger**
3. Select the object: **HandsMen_Order__c**
4. Click **Submit**.
5. A **new trigger tab** will open separately from the class.

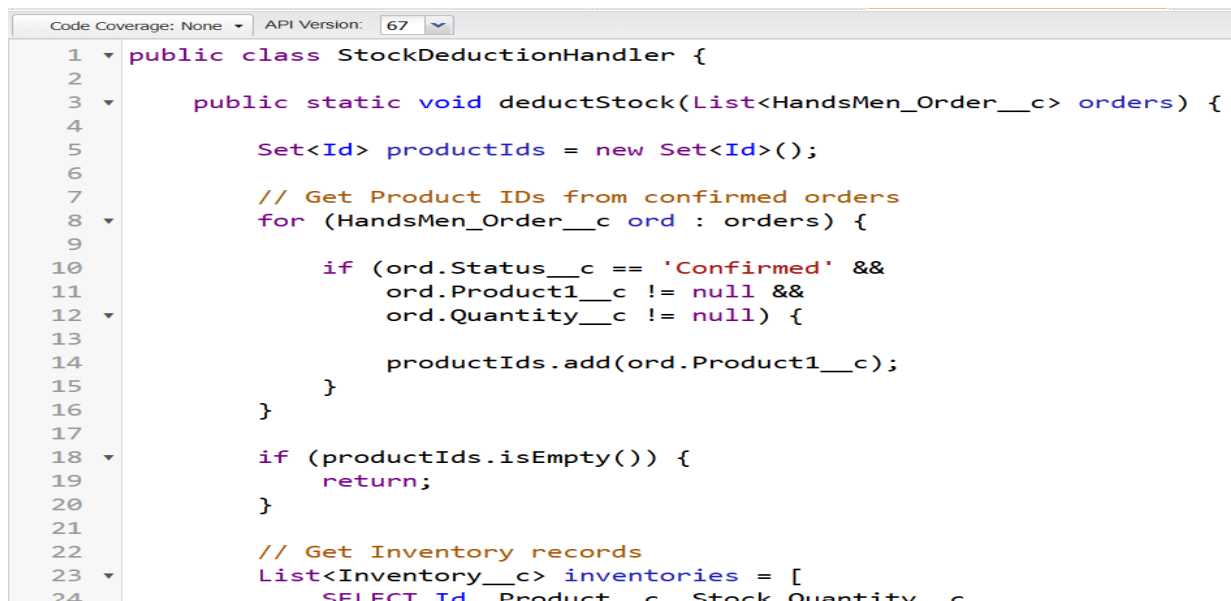

```
File Edit Debug Test Workspace Help < >
UpdateOrderTotalHandler.apxc UpdateOrderTotalTrigger.apxt
Code Coverage: None API Version: 67 Go To
1 trigger UpdateOrderTotalTrigger on HandsMen_Order__c (after insert, after update) {
2     UpdateOrderTotalHandler.calculateTotal(trigger.new);
3 }
```

Stock Deduction Trigger

In Developer Console:

1. Open **Developer Console**.
2. Click **File → New → Apex Class**.
3. Enter: **StockDeductionHandler**
4. Click **OK**.
5. The class opens in a separate tab.
6. Write/paste your **handler class code**.

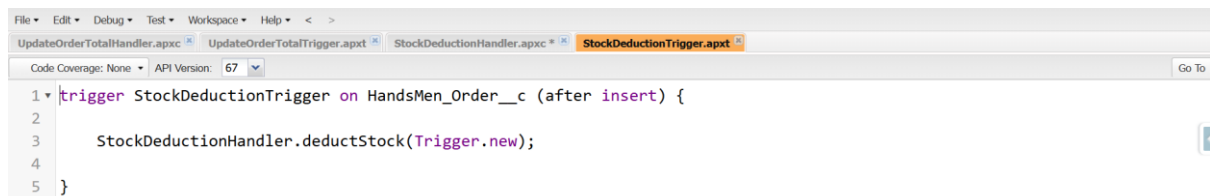

7. Click **File** → **Save**.

```
Code Coverage: None | API Version: 67
1 public class StockDeductionHandler {
2
3     public static void deductStock(List<HandsMen_Order__c> orders) {
4
5         Set<Id> productIds = new Set<Id>();
6
7         // Get Product IDs from confirmed orders
8         for (HandsMen_Order__c ord : orders) {
9
10            if (ord.Status__c == 'Confirmed' &&
11                ord.Product1__c != null &&
12                ord.Quantity__c != null) {
13
14                productIds.add(ord.Product1__c);
15            }
16        }
17
18        if (productIds.isEmpty()) {
19            return;
20        }
21
22        // Get Inventory records
23        List<Inventory__c> inventories = [
24            SELECT Id, Product__c, Stock Quantity__c
```

Create the Apex Trigger separately

1. In Developer Console, click **File** → **New** → **Apex Trigger**.
2. Enter the trigger name: **StockDeductionTrigger**
3. Select the object: **HandsMen_Order__c**
4. Click **Submit**.
5. A new **trigger** tab will open separately from the class.

```
File | Edit | Debug | Test | Workspace | Help | < | >
UpdateOrderTotalHandler.apxc | UpdateOrderTotalTrigger.apxt | StockDeductionHandler.apxc | StockDeductionTrigger.apxt
Code Coverage: None | API Version: 67 | Go To
1 trigger StockDeductionTrigger on HandsMen_Order__c (after insert) {
2
3     StockDeductionHandler.deductStock(trigger.new);
4
5 }
```

3. Loyalty Status Update Trigger

In Developer Console:

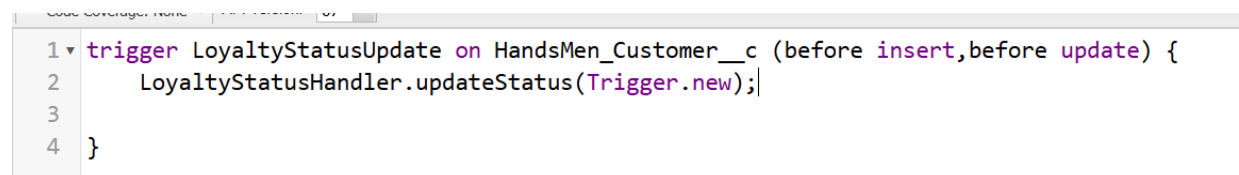

1. Open **Developer Console**.
2. Click **File** → **New** → **Apex Class**.
3. Enter: **LoyaltyStatusHandler**
4. Click **OK**.
5. The class opens in a separate tab.
6. Write/paste your **handler class code**.
7. Click **File** → **Save**.

```
1 public class LoyaltyStatusHandler {
2
3     public static void updateStatus(List<HandsMen_Customer__c> customers) {
4
5         for (HandsMen_Customer__c customer : customers) {
6
7             if (customer.Total_Purchases__c == null) {
8                 customer.Loyalty_Status__c = 'Silver';
9             }
10            else if (customer.Total_Purchases__c > 1000) {
11                customer.Loyalty_Status__c = 'Gold';
12            }
13            else if (customer.Total_Purchases__c < 500) {
14                customer.Loyalty_Status__c = 'Bronze';
15            }
16            else {
17                customer.Loyalty_Status__c = 'Silver';
18            }
19        }
20    }
21 }
```

Create the Apex Trigger separately

1. In Developer Console, click **File → New → Apex Trigger**.
2. Enter the trigger name: **LoyaltyStatusUpdate**
3. Select the object: **HandsMen_Customer__c**
4. Click **Submit**.
5. A **new trigger tab** will open separately from the class.

```
1 trigger LoyaltyStatusUpdate on HandsMen_Customer__c (before insert,before update) {
2     LoyaltyStatusHandler.updateStatus(Trigger.new);
3
4 }
```

Steps to Create Batch Jobs

1. Loyalty Points Calculation Batch Job

1. Open the **Developer Console** in Salesforce.
2. Click **File → New → Apex Class**.
3. Enter the class name as **LoyaltyPointsBatchJob**.
4. Implement the **Database.Batchable** interface.
5. In the start() method, retrieve the required **Customer** records.
6. In the execute() method, calculate and update the loyalty points for each customer.
7. In the finish() method, perform any required completion actions.
8. Save the Apex class.

9. Create a separate **Scheduler Apex Class** to schedule the batch job.
10. Set the schedule to run **every Sunday at 12:00 AM**.
11. Save and activate the scheduled job.
12. Verify that customer loyalty points are updated weekly.

```

1  global class LoyaltyPointsBatchJob
2      implements Database.Batchable<SObject>, Schedulable {
3
4      // Start Method
5      global Database.QueryLocator start(Database.BatchableContext BC) {
6
7          return Database.getQueryLocator(
8              'SELECT Id, Total_Purchases__c, Loyalty_Point__c ' +
9              'FROM HandsMen_Customer__c'
10         );
11     }
12
13     // Execute Method
14     global void execute(
15         Database.BatchableContext BC,
16         List<SObject> records
17     ) {

```

2. Inventory Sync Batch Job

1. Open **Developer Console** → **File** → **New** → **Apex Class**.
2. Enter the class name as **InventorySyncBatch**.
3. Implement the **Database.Batchable** interface.
4. In the start() method, retrieve the required **HandsMen Product** records.
5. In the execute() method, process the stock records and synchronize the stock quantities with the external warehouse system.
6. In the finish() method, handle the completion of the synchronization process.
7. Save the Apex class.
8. Create a separate **Scheduler Apex Class** for the batch job.
9. Configure the schedule to run **daily at 2:00 AM**.
10. Save and activate the scheduled job.
11. Verify that the inventory stock levels are synchronized as expected.

```

File Edit Debug Test Workspace Help < >
derTotalHandler.apxc UpdateOrderTotalTrigger.apxt StockDeductionHandler.apxc StockDeductionTrigger.apxt LoyaltyStatusHandler.apxc LoyaltyPointsBatchJob.apxc InventorySyncBatch.apxc
Code Coverage: None API Version: 67 Go 1

1 global class InventorySyncBatch
2 implements Database.Batchable<SObject>, Schedulable {
3
4 // Start Method
5 global Database.QueryLocator start(Database.BatchableContext BC) {
6
7     return Database.getQueryLocator(
8         'SELECT Id, Stock_Quantity__c ' +
9         'FROM HandsMen_Product__c ' +
10        'WHERE Stock_Quantity__c < 10'
11    );
12 }
13
14 // Execute Method
15 global void execute(
16     Database.BatchableContext BC,
17     List<SObject> records

```

Steps to View Batch Jobs

1. Log in to **Salesforce**.
2. Go to **Setup**.
3. In the **Quick Find** box, search for **Apex Jobs**.
4. Select **Apex Jobs**.
5. The **Apex Jobs** page displays the batch and scheduled Apex jobs.
6. Check the **Status** column to see whether the job is **Completed**, **Processing**, **Queued**, or **Failed**.
7. Check the **Submitted Date** and **Completed Date** to verify when the job ran.
8. Review the **Job Type** and other available details to confirm that the batch job executed correctly.

Scheduled Jobs

All Scheduled Jobs Help for this Page

The All Scheduled Jobs page lists all of the jobs scheduled by your users. Multiple job types may display on this page. You can delete scheduled jobs if you have the permission to do so.

Percentage of Scheduled Jobs Used: 2%
 You have currently used 2 scheduled Apex jobs out of an allowed organization limit of 100 active or scheduled jobs. To learn about how this limit is calculated and what contributes to it see the [Lightning Platform Apex Limits](#) topic.

Conclusion

The **HandsMen Threads Salesforce application** was successfully developed to streamline and automate major business operations, including **customer management, order processing, inventory management, and loyalty program management**. The implementation integrates Salesforce automation tools such as **Record-Triggered Flows, Scheduled Flows, Email Templates, Email Alerts, Apex Triggers, Apex Handler Classes, and Batch Apex Jobs** to reduce manual effort and improve process efficiency.

The **Order Confirmation Flow** automatically sends confirmation emails when an order reaches the confirmed status, while the **Stock Alert Flow** monitors inventory and sends notifications when stock falls below the defined threshold. The **Loyalty Status Flow** automatically evaluates customer purchases and updates their loyalty status. In addition, **Apex Triggers and Handler Classes** provide customized logic for calculating order totals, managing stock deductions, and updating customer loyalty information.

The scheduled **Batch Apex Jobs** further support large-scale background processing by updating loyalty points and managing inventory-related operations. Email templates and alerts ensure that customers and internal teams receive timely and relevant notifications.

Overall, the project demonstrates how **Salesforce declarative automation and programmatic development can be combined** to create an efficient, scalable, and reliable CRM solution. The system improves data accuracy, minimizes repetitive manual tasks, supports timely decision-making, and provides a better overall experience for both customers and business users.
